

Sprint 1 Report
MyPantry
Sprint End: 1/26

Things to stop doing: We want to stop being disorganized with our tasks and do a better job of specifying different tasks for each member instead of having both members work on the same task at times.

Actions to start doing: We want to start splitting tasks better with frontend and backend tasks. Right now some of our tasks include backend and frontend tasks and we want to split these up so that it is easier to work on as a group. We also want to start working on branches for each feature, so that we can always have a working product in the master branch.

Actions to keep doing: We want to continue to meet up three times a week, as a group, and once with our TA. We want to continue communicating well as a group and staying organized as a group. We also want to continue at our current pace, as we feel this will be good enough to have a good product by the end of the class.

Work Completed/ Not Completed:

Completed user stories:

As a food pantry or someone seeking food assistance, I want to be able to go to a page that has background information, a signup button, and a login button, so that I can understand the MyPantry app and see ways to sign up or login.

As a food pantry, I want to be able to sign up as a food pantry with contact information and the name of the pantry, so that I can login to the page.

As someone seeking food assistance, I want to be able to sign up as someone that is looking for a food pantry and create a profile with my contact information, so that I can login to the page.

Not completed user stories:

As a food pantry or someone seeking food assistance, I want to be able to sign in and use my information. (Without google login)

Create two different pathways for a food pantry vs someone seeking food assistance, as both will have a different view of the app and want to do different things.

Work Completion Rate:

User Stories Completed: We were able to complete 3 user stories during this sprint.

Total Number Work Hours: The total number of hours during the prior sprint was around 20 hours if we include the amount of time spent learning and researching web applications, as our group did not have experience building web apps.

User Stories/ Day: We were able to complete a user story about once every 4 days.

Work Hours/ Day: We estimate that we worked about 1-2 hours a day.

Ideal: We believe that our current work rate is good enough to complete that project, except we believe that we should be doing more user stories a day. We believe that towards the end we will be able to do more user stories a day, as we will be spending less time on research/learning new things.
